

HM Treasury, 1 Horse Guards Road, London, SW1A 2HQ

Andrew Bailey
Governor
Bank of England
Threadneedle Street
London
EC2R 8AH

26 November 2025

Dear Andrew,

REMIT FOR THE MONETARY POLICY COMMITTEE

Economic growth is the central mission of this government. Low and stable inflation is essential for long-term economic growth and sustained increases in living standards. It reduces uncertainty and eases costs for consumers and businesses, allowing them to make long-term planning and investment decisions. The Monetary Policy Committee (MPC) of the Bank of England is an important guarantor of our economic stability through its primary objective to maintain price stability, and the government respects and fully supports the operational independence of the MPC.

Inflation has fallen significantly from its peak of 11.1% in October 2022 and underlying inflationary pressures have continued to ease, showing monetary policy is working as it should. Despite this progress, inflation remains elevated, and for many it will feel like pay packets are having to stretch further. By keeping government borrowing under control and reducing borrowing from year to year, fiscal policy is helping to reduce inflationary pressure and support the MPC as it acts to return inflation to target sustainably. The government has also announced a package of measures to bear down on prices and help ease cost of living pressures for working people. Measures announced at this Budget are expected to lower inflation by 0.4 percentage points in 2026-27.

The Bank of England Act 1998 (the Act) requires that I specify the definition of price stability and the government's economic policy at least once in every period of 12 months beginning on the anniversary of the day the Act came into force.

I hereby re-confirm the inflation target as 2 per cent as measured by the 12-month increase in the Consumer Prices Index (CPI). The inflation target of 2 per cent is symmetric and applies at all times. This reflects the primacy of price stability and the forward-looking inflation target in the UK monetary policy framework.

In accordance with the Act, I also confirm that the government's economic policy objective is to restore broad-based and resilient growth built on strong and secure foundations. Price and financial stability are essential pre-requisites to achieve this objective, providing the stability required for investment and reform to help businesses to thrive and to help keep the cost of living low for families.

I also confirm that the Asset Purchase Facility will remain in place for the financial year 2026-27, and for as long as is needed.

I am grateful for the good work and commitment shown by you and all the members of the Committee.

A copy of the remit is attached. To support economic stability, the remit is unchanged from the letter I sent you on 14 November 2024.

I am copying this letter and the attached remit to the Chairs of the Treasury Committee and Economic Affairs Committee.

Best wishes,

A handwritten signature in dark ink, reading "Rachel Reeves." The signature is written in a cursive, flowing style.

RT HON RACHEL REEVES MP
Chancellor of the Exchequer

REMIT FOR THE MONETARY POLICY COMMITTEE

The Bank of England Act 1998 ("the Act") came into effect on 1 June 1998. The Act states that in relation to monetary policy, the objectives of the Bank of England shall be:

- a) to maintain price stability; and
- b) subject to that, to support the economic policy of His Majesty's Government, including its objectives for growth and employment.

In order to comply with the Act, this remit sets out what price stability shall be taken to consist of and what the economic policy of the government shall be taken to be.

Price stability

I confirm that the operational target for monetary policy remains an inflation rate of 2 per cent, measured by the 12-month increase in the Consumer Prices Index. The inflation target of 2 per cent applies at all times. This reflects the primacy of price stability and the inflation target in the UK monetary policy framework.

The inflation target is forward-looking to ensure inflation expectations are firmly anchored in the medium term. The government believes that low and stable medium-term inflation is an essential pre-requisite for economic prosperity.

The framework is based on the recognition that the actual inflation rate will on occasion depart from its target as a result of shocks and disturbances. Such factors will typically move inflation away from the target temporarily. Attempts to keep inflation at the inflation target in these circumstances may cause undesirable volatility in output due to the short term trade-offs involved, and the Monetary Policy Committee may therefore wish to allow inflation to deviate from the target temporarily.

Circumstances may also arise in which attempts to keep inflation at the inflation target could exacerbate the development of imbalances that the Financial Policy Committee may judge to represent a potential risk to financial stability. The Financial Policy Committee's macroprudential tools are the first line of defence against such risks, but in these circumstances the Monetary Policy Committee may wish to allow inflation to deviate from the target temporarily, consistent with its need to have regard to the policy actions of the Financial Policy Committee.

In exceptional circumstances, shocks to the economy may be particularly large or the effects of shocks may persist over an extended period, or both. In such circumstances, the Monetary Policy Committee is likely to be faced with more significant trade-offs between the speed with which it aims to bring inflation back to the target and the consideration that should be placed on the variability of output.

In forming and communicating its judgements the Committee should promote understanding of the trade-offs inherent in setting monetary policy to meet a forward-looking inflation target while giving due consideration to output volatility. It should set out in its communication:

- the outlook for inflation and, if relevant, the reasons why inflation has moved away from the target or is expected to move away from the target;
- the policy action the Committee is taking in response;
- the horizon over which the Committee judges it is appropriate to return inflation to the target;

- the trade-off that has been made with regard to inflation and output variability in determining the scale and duration of any expected deviation of inflation from the target; and
- how this approach meets the government's monetary policy objectives.

If inflation moves away from the target by more than 1 percentage point in either direction, I shall expect you to send an open letter to me, covering the same considerations set out above and referring as necessary to the Bank's latest Monetary Policy Report and forecasts, alongside the minutes of the following Monetary Policy Committee meeting. In the circumstance when the Office for National Statistics releases that inflation data after a meeting of the Committee has commenced and before the minutes of that meeting are published, I shall expect a letter within seven days of the publication of the data. The reason for publishing the open letter at those times is to allow the Committee time to form and communicate its strategy towards returning inflation to the target after consideration of the trade-offs.

You would send a further letter if inflation is more than 1 percentage point above or below the target after three months. A letter would be sent, as before, alongside the minutes of the following Monetary Policy Committee meeting or within seven days of publication of the data if the meeting has already commenced.

In keeping with the principles underpinning the monetary policy framework, and the practice followed in previous inflation open letter exchanges, I suggest that you copy your letters to the Chair of the Treasury Committee.

In responding to your letter and confirming whether an appropriate balance has been struck in the judgements the Committee has made, I shall, of course, have regard to the circumstances prevailing at the time.

The thresholds do not define a target range. Their function is to define the points at which I shall expect an explanatory letter from you because the actual inflation rate is appreciably away from its target.

Unconventional policy instruments

In the event of exceptional shocks that result in the Monetary Policy Committee's conventional policy instrument having approached its effective lower bound, the Committee may judge it necessary to use unconventional policy instruments in order to set monetary policy consistent with the requirements of this remit. The Committee may judge it necessary to unwind any unconventional policy instruments, consistent with the requirements of this remit, for monetary policy purposes.

Where those instruments involve unconventional interventions in specific markets or activities, with implications for credit risk or credit allocation, I shall expect the Committee to work with the government to ensure the appropriate governance arrangements are in place to ensure accountability in the use of such instruments. This was the case with the Bank of England and the Treasury in establishing the Asset Purchase Facility in 2009, the Funding for Lending Scheme in 2012, and the Term Funding Schemes in 2016 and in 2020. The Committee may also judge it to be appropriate to deploy forward guidance in order to influence expectations and thereby meet its objectives more effectively. The government considers any use of this to be a matter subject to the Committee's operational independence in setting policy.

The government's economic policy objective

The government's economic policy objective is to restore broad-based and resilient growth built on strong and secure foundations. Price and financial stability are essential pre-requisites to achieve this objective.

To achieve this objective, the government's economic strategy consists of:

- maintaining a stable macroeconomic environment, key to which is operationally independent monetary policy, responsible for maintaining price stability and supporting the economy;
- supporting investment through the effective management of public finances and overseeing sustainable taxes and borrowing, to deliver long-term growth and accelerate the transition to a climate resilient, nature positive and net zero economy;
- supply-side reform and targeted industrial strategy to remove the barriers to our productive capacity and increase productivity-enhancing investment, increasing access to high-quality jobs across the UK;
- growing the financial services sector and increasing its international competitiveness, while enhancing its role in financing growth, safeguarding financial stability and consumer protection, and supporting the transition to a net zero economy.

Accountability

The Monetary Policy Committee is accountable to the government for the remit set out in this letter. The Committee's performance and procedures will be reviewed by the Bank of England's Court on an ongoing basis (with particular regard to ensuring the Bank is collecting proper regional and sectoral information). The Bank will be accountable to Parliament through regular reports and evidence given to the Treasury Committee. Finally, through the publication of the minutes of the Monetary Policy Committee meetings and the Monetary Policy Report, the Bank will be accountable to the public at large.

Restatement of the Remit

Any changes to this remit will be set out in future fiscal events and the inflation target will be confirmed alongside those events. There is a value in continuity and I will have proper regard to that, but I will always consider the case for updating the remit on its merits.

Coordination between monetary policy and macroprudential policy

In order to foster coordination between monetary and macroprudential policy, there is overlap between the membership of the Monetary Policy Committee and the Financial Policy Committee. To enhance that coordination, where appropriate, the Monetary Policy Committee should reflect, in any statements on its decisions, the minutes of its meetings and its Monetary Policy Reports, how it has had regard to the policy actions of the Financial Policy Committee. In the same way, the government had also asked the Financial Policy Committee to note in the records of its meetings, its policy statements and its Financial Stability Reports how it has had regard to the policy settings and forecasts of the Monetary Policy Committee.
